Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### DETAILED ACTION

1. This office action is responsive to the pre-amendment filed on 03/06/2004.

#### ***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1 and 2 are rejected under 35 U.S.C. 103(a) as being unpatentable over Umehara et al (US Patent 6,774,849) in view of Takeuchi et al (US Patent 5,173,711).

Umehara et al disclose, in figure 17, an inverted-F antenna 1 fixed on a ground conductor surface 8h, a radiating conductor plate 1a disposed opposing and substantially in parallel with the ground conductor surface, a power-feeding conductor plate 1d extending substantially perpendicular from an outer edge of the radiating conductor plate, and a shorted conductor plate extending substantially perpendicular from an outer edge of the radiating conductor plate and connected to the ground conductor plate. The patent to Umehara et al differs from the claimed invention because it does not disclose a plurality of shorted conductor plates connected between the radiating conductor plate and the ground conductor plate. Takeuchi et al disclose, in figure 2, an antenna device comprising a plurality of radiating antennas, each antenna comprising a radiating radiator plate, a feed, a short circuiting conductor, and a plurality of shorting pins connected between the radiating plate and the ground plane 25. Since one of ordinary skill in the art would have recognized the benefits of providing

impedance matching, correction of phase, and obtaining of an excellent axial ratio, it would have been obvious to employ the antenna of Umehara et al with a plurality of shorting elements as taught by Takeuchi et al, see column 5, lines 11-31.

The patents to Iwai et al, Saitoh, Liebendoerfer et al, Stoiljkovic et al, Sanad, Eggleston et al, and Segerstedt are cited as of interest showing the antenna similar to that disclosed.
